

Playback of the **ROTHKAMM** *FB02* Compact Disc is fully compatible with a regular stereo setup, but to experience the **TRIPHONY** audio effect you will need to re-arrange the speakers of a home theatre or computer speaker system. Audio on *FB02* is encoded as a regular stereo image that decodes on a 4.1 channel system. Alternately, a 2.1 system with two additional speakers or a 5.1 system can be used. The speakers are usually labeled Left Front, Right Front, Left Back (or Surround), Right Back (or Surround), and Sub(woofer). Arrange the Left Front and Right Front speaker so they almost touch and place them at a distance in front of you. The speakers should be elevated to ear level. Take the Sub-woofer and place it on the ground at half the distance between you and the front speakers. Now take the Left Back and Right Back and place them (elevated to ear level) at a distance to the left and right, so that you are almost between the speakers. Make sure that the same sound and volume level is on all Left speakers and all Right speakers, respectively. If you were to connect all speakers with straight lines you would see a tetrahedron, a 3-sided pyramid upside down.
